

The background of the slide is a complex network of thin, light purple lines connecting numerous small, semi-transparent purple dots of varying sizes. The dots are scattered across the entire frame, creating a dense, web-like structure that resembles a neural network or a data visualization of connections.

# Promising EEG-based markers of consciousness

BCI Meeting

Banff 2025

Bjørn Erik Juel

# EEG-based marker of consciousness

Measurable signatures in the electrical brain activity that are **always apparent** when some individual **is conscious** and is **never there** when their **consciousness is gone**.

# An example strategy for finding an EEG-based markers of consciousness

Measure brain signals from individuals ...

... and check if your marker of reliably tracks changes in consciousness!

... in different states ...

# Why do we want markers of consciousness?

**Approaching a fundamental understanding of consciousness**

University of Oslo

2018

# Some examples of Electrophysiological markers of consciousness?

## Proposed EEG measures of consciousness: a systematic, comparative review

André Sevenius Nilsen\*, Bjørn Erik Juel, Benjamin Thürer, Johan Frederik Storm\*

*Brain Signalling Group, Department of Molecular Medicine, Institute of Basic Medical  
Sciences, University of Oslo (UiO), 0372 Oslo, Norway*

Strong feedback

High spectral edge frequency

High (xyz) entropy

High fractal

Low slow-wave activity

transfer entropy

low spectral exponent

specific  
events

High mutual  
information

world connectivity

low delta power

# Limitations

## Most measures

- ... are tested without explicit control of conscious experience
- ... are tested in between state paradigms
- ... have no clear theoretical grounding
- ... fail crucial tests (see next presentation).

# Kinds of EEG markers of consciousness

# Theory vs. data driven

# State vs. content based

# Resting state vs. Evoked activity

# Kinds of EEG markers of consciousness

Is there  
anyone in  
there?

Theory vs. data driven

State vs. content based

Resting state vs. Evoked activity

Can they feel  
this?

# Kinds of EEG markers of consciousness

Propofol anesthesia

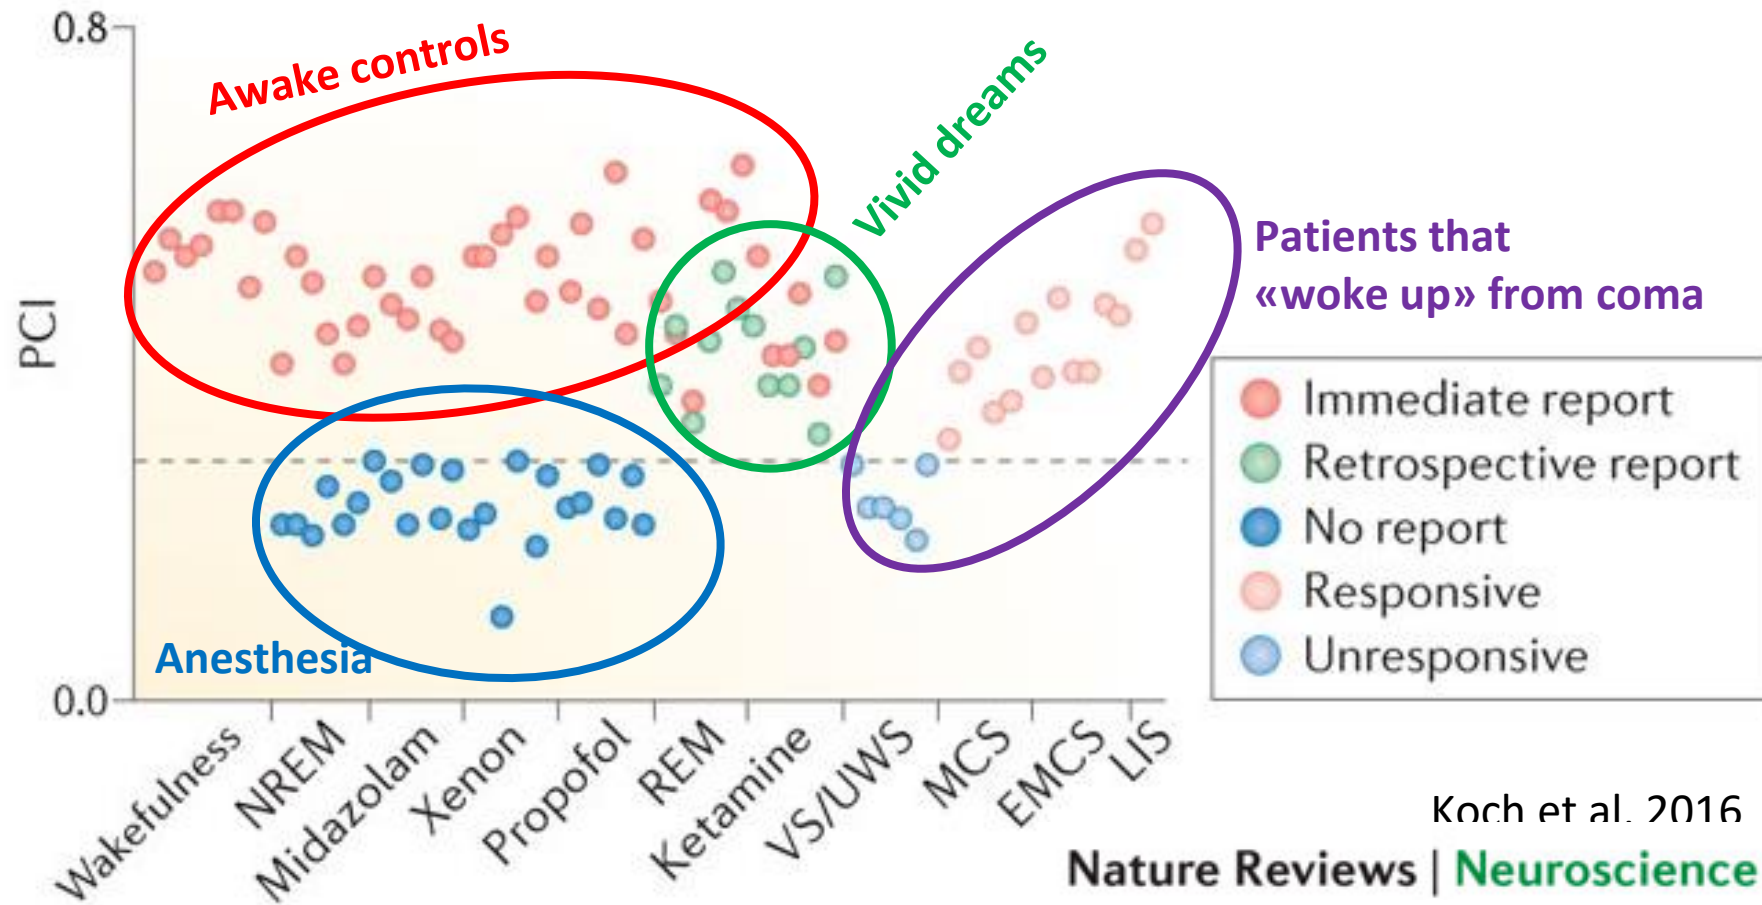

Awake control subject

Ferrarelli et al 2010, PNAS

# Perturbational complexity index

# So what are promising EEG-based markers of consciousness?

It depends! 😞

- An (opinionated) list of characteristics:
  - Independent of behavioral and physiological state
  - Theoretically grounded
  - Practically applicable
  - Indicative of the structure (content) of the experience
